INTERNATIONAL SEARCH REPORT

International application No.

PCT/US05/39070

| Box 1 Observations where certain claims were round disearchable (Continuation of Item 1 of Hrst sneet) | | | | |
|---|--|--|--|--|
| This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons: | | | | |
| 1. Claim Nos.: because they relate to subject matter not required to be searched by this Authority, namely: | | | | |
| Claim Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically: | | | | |
| 3. Claim Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a). | | | | |
| Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet) | | | | |
| This International Searching Authority found multiple inventions in this international application, as follows: Please See Continuation Sheet | | | | |
| 1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims. 2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee. 3. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.: | | | | |
| 4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-28 and 31 as drawn to a method of evaluating the level of T cells Remark on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees. | | | | |

BOX II. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claim(s) 1-28 and 31, drawn to method of evaluating the level of T cells.

Group II, claim(s) 29-31, drawn to method of evaluating gene expression.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In order for more than one species to be examined, the appropriate additional examination fees must be paid. The species are as follows:

Each gene listed in TABLE I.

The claims are deemed to correspond to the species listed above in the following manner:

Claims 29-31 are generic and, therefore, correspond to any species.

The following claim(s) are generic: 29-31.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I relies on evalutation of the level of T cells in the dermis and/or epidermis. It has different method steps, reagents and endpoints than the method of Group II. The method of Group II requires evaluation of gene expression and does not share a corresponding technical feature with the method of Group I for reasons above.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Each species is a different gene, having a different sequence, function and expression pattern, and therefore they do not share corresponding special technical features.
